Brampton, Ont., teen among youngest Canadians to die with COVID-19

A teenage girl in Brampton, Ont., is among the youngest Canadians to die with COVID-19 after her family said she contracted the coronavirus amid the province's devastating third wave.

Emily Victoria Viegas, 13, died on April 22, according to an online fundraiser launched in her memory that's raised more than \$40,000 for her grieving family.

Father friend Adrienne Goddard, who organized the fundraiser, told CBC News that Viegas had contracted COVID-19 as well as pneumonia. Her mother is currently in intensive care with COVID-19. Goddard said while her daughter was sick, she is also infected and is isolating, having OK.

Dr. Andrew Hunter, William Odele Health System's interim corporate chief of emergency medicine, said Monday afternoon that this is the first person under the age of 19 who has died in their health system.

"We extend our deepest condolences to her family, and our thoughts and prayers are with them at this heartbreakingly difficult time."

Hunter, who is also chair of the health system's COVID clinical response committee, said he couldn't speak to if Viegas had any pre-existing health conditions. He did note, however, that in the last 24 hours, he had admitted five patients with COVID-19 to his intensive care unit, all of whom were hospitalizations due to COVID-19.

Dr. Dirk Ireyer, Ontario's chief coroner, confirmed Monday that the province is investigating the teen's

family members.

Even so, severe illness and death from COVID-19 among the youngest Canadians has been exceedingly rare. According to national statistics, of the 208,195 people aged 19 and under who have been infected, 955 have died in hospital. Of those, 142 are under 10 years old.

Eight Canadians 19 and under have died with the disease, including those in Ontario.

Death "truly heartbreaking," leaders say

A spokesperson confirmed that Viegas was confirmed in the Dufferin-Peel Catholic District School Board.

"This is a tragedy to the entire DPCDSB community. At this time, we are focusing on supporting staff and students and respecting the privacy of the grieving family," the board said in a email.

In a statement released Monday morning, Premier Doug Ford said his "heart absolutely breaks for this family."

"I can't imagine the unbearable pain and sorrow they are feeling right now," Ford said. "It's heart-wrenching and a devastating reminder of what this virus can do. On behalf of all Ontarians, I'm sending my deepest condolences to everyone who is suffering from the terrible loss of this young life."

Kelli Barrett, a critical care physician at University Health Network in Toronto, told CBC News last week that ICUs are increasingly filled with essential workers and their

hearts go out to the one of the two transmissible and more likely to cause serious illness and death.

Vietnam of course now account for a significant majority of new infections driving the third wave of the pandemic in Ontario.

"They are focusing on supporting staff and students and respecting the privacy of the grieving family," the board said in a email.

In a statement released Monday morning, Premier Doug Ford said his "heart absolutely breaks for this family."

"I can't imagine the unbearable pain and sorrow they are feeling right now," Ford said. "It's heart-wrenching and a devastating reminder of what this virus can do. On behalf of all Ontarians, I'm sending my deepest condolences to everyone who is suffering from the terrible loss of this young life."

Kelli Barrett, a critical care physician at University Health Network in Toronto, told CBC News last week that ICUs are increasingly filled with essential workers and their

Ontario has made a formal request to the Canadian Armed Forces to help deal with a surge in critical care cases associated with COVID-19's third wave, just days after it rebuffed an offer by the federal government to send extra personnel.

In a statement Monday, a spokesperson for Solicitor General Sylvia Jones said the previous has "made a formal request to the Canadian Armed Forces and Canadian Red Cross organizations."

"In addition to health human resources, we are requesting logistical and operational support as we seek to augment our response to COVID-19," the statement from Jones' press secretary Stephen Wainwright said.

The province reported 3,510 new cases of COVID-19 and 24 additional deaths on Monday. As well, Ontario Health Minister Christine Elliott confirmed that nine health-care professionals from Newfoundland and Labrador would arrive in the province on Tuesday — including Premier Andrew Furey's wife, Dr. Alison

Marshall, meanwhile, announced a series of new restrictions to curb the spread of COVID-19, including a ban on private indoor and outdoor gatherings over the next four weeks.

Other restrictions that take effect Wednesday at 12:01 a.m. include a 25 per cent capacity limit on retail stores as well as all cultural and social events, including dining and visiting limited to groups of four and the closure of food courts in the province.

"Please stay home as much as possible," Dr. Brent Rosin, the province's chief public health officer, said at a news conference. Marshall also reported 210 new cases of COVID-19 and six deaths linked to a more contagious coronavirus variant on Monday.

Coronavirus: What's happening in Canada and around the world on Monday

Nova Scotia, which recently tightened up restrictions and imposed fines for violations, reported 66 new cases of COVID-19 - a new high for the province. "COVID is back and it won't go away until we get that 70 per cent vaccination rate," Ian Rankin said at a briefings Monday.

The province announced Monday that all schools in the Halifax area will transition to at-home learning this week. Dr. Robert Strang, Nova Scotia's chief medical officer of health, said the school closures were needed due to "significant impacts" on the province's area education system caused by the growth of COVID-19 activity in the schools, as well as high numbers of staff forced to isolate while awaiting test results or due to being a close contact of an infected student.

What's happening around Canada

As of 4 p.m. ET on Monday, Dr. Jennifer Russell, the province's chief medical officer of health, also confirmed that a previously reported case was of the coronavirus variant first detected in India.

Newfoundland and Labrador reported four new cases of COVID-19 on Monday. Health officials said the new cases involve travel within Canada.

Saskatchewan reported 245 new cases of COVID-19 and one related death on Monday.

In Alberta, council in the Regional Municipality of Wood Buffalo - which includes the Fort McMurray area - passed a motion to declare a local state of emergency and ride out the COVID-19 crisis, according to a spokesperson for the region.

Students from elementary through to high school in Fort McMurray are moving online, with students set to return to the classroom on May 10, officials said.

Manitoba on Monday reported nine new cases of COVID-19 on Monday and eight additional deaths.

COVID-19 hospitalizations stood at 66, with 167 people in intensive care.

New Brunswick reported seven new

cases of COVID-19 Monday. Dr. Jennifer Russell, the province's chief medical officer of health, also confirmed that a previously reported case was of the coronavirus variant first detected in India.

In British Columbia, health officials will provide updated figures covering the weekend later Monday.

What's happening around the world

What's happening around the world

As of Monday afternoon, more than 147.3 million cases of COVID-19 had been reported worldwide, according to Johns Hopkins University. The reported global death toll stood at more than 3.1 million.

The situation in India, where COVID-19 cases have surged, is "beyond heartbreaking," and the World Health Organization is sending extra staff and supplies there to help fight the pandemic, WHO chief Tedros Adhanom Ghebreyesus said on Monday.

"WHO is doing everything we can, providing critical equipment and supplies, including thousands of oxygen concentrators, prefabricated mobile hospitals and laboratory supplies," he told a briefing.

In the Asia-Pacific region, confirmed coronavirus infections in the Philippines surged past one million on Monday in the country's

lowest grain milestone, as officials assess whether to extend a month-long lockdown in the Manila region amid a deadly spike or relax it to fight a economic recession, joblessness and hunger.

Pakistani authorities, meanwhile, are racing against time to add more beds and ventilators at hospitals amid a surge in COVID-19 cases in the last few days. Authorities have started summoning troops to ensure people don't violate physical distancing rules, according to Interior Minister Sheikh Rashid Ahmed. Pakistan said it will be forced to impose a nationwide lockdown if the COVID-19 situation does not improve this week.

In Europe, Germany's coronavirus infection rate rose again on the weekend despite stricter restrictions and Finance Minister Olaf Scholz said he did not expect moves to ease curbs before the end of May.

Much of Italy is reopening after weeks of strict coronavirus lockdowns, with museums welcoming the public and bars and restaurants open for outdoor, sit-down service.

Despite appeals for physical distancing, public transport and Rose and Milan was jammed as high schools were allowed to operate at least 70 per cent in-person learning starting Monday.

In the Americas, Mexico's top diplomat travelled to Moscow on Sunday for a visit with Russian officials, his office said, and talks to host a virtual meeting between Mexico and Russia to plan for Mexico to host Russia's Sputnik V COVID-19 vaccine domestically after delays in shipment.

In Africa, South African researchers will on Wednesday resume a study further evaluating the efficacy of Johnson & Johnson's COVID-19 vaccine in the field, after it was temporarily suspended along with use of the shot in the United States.

Ontario keeping AstraZeneca shots to those aged 40+ for now due to supply issues

TORONTO -- Ontario Health Minister Christine Elliott's office said Friday that the province will continue to administer AstraZeneca COVID-19 vaccine to those 40 years of age and older, despite an updated recommendation from Canada's National Advisory Committee on Immunization (NACI) that it now be offered to those 50 and over.

A spokesperson for Elliott's office said in a statement that while Ontario welcomes the recommendation to lower the age threshold, it is not currently sufficient supply to expand eligibility.

"With approximately 337,000 doses remaining and future shipments set to arrive in May, we will continue to administer AstraZeneca to individuals 40 and over in pharmacies and primary care settings until we receive additional supply," the statement read. "This is aligned with

Ontario's vaccine rollout which prioritizes seniors first."

The NACI said Friday that it is now recommending that the AstraZeneca vaccine be offered to anyone 30 years of age and older in

where it was slated to provide the update.

The committee had previously advised giving the shots to those 35 and older as it evaluated evidence of a link to rare blood clots which had mostly occurred in younger people.

Also on Friday, Ontario reported its first case of a rare blood clot associated with the AstraZeneca vaccine, in a man in his 60s. However health officials maintain that the chance of getting a clot from the vaccine is low.

Ontario expanded use of the shot to those 40 years of age and older earlier this week and has seen its daily vaccination numbers leap ahead since doing so.

The vaccine is being distributed in Ontario through pharmacies and doctor's offices and appointments to get the shot have been switched up quickly as they become available.

To date, Ontario has received 900,000 doses of the AstraZeneca vaccine from various sources.

The federal government has said that 4.1 million more doses of the vaccine are expected to arrive in the country by the end of June, but a delivery schedule to the provinces has not yet been published.

Right share the shots.

The U.S. has stockpiled tens of millions of AstraZeneca shots, but health officials there have not approved the vaccine for use.

The National Advisory Committee on Immunization (NACI) has recommended provinces administer the AstraZeneca vaccine to adults aged 30 years old and older but the province says they're not quite ready to lower the age.

NACI doctors emphasized that each province and region will set its own policy on vaccination.

"We're getting inundated by calls and emails from people about the AstraZeneca shot ever since it went down to 40 plus," says Bates.

Canada is not expecting any additional planning surrounding cold storage, but Bates says pharmacies will have the capabilities to manage the vaccine. Unlike AstraZeneca, the Pfizer vaccine needs to be kept frozen.

"When it's thawed it's good for up to five days in a fridge," says Bates. "You just manage your bookings and inventory."

Adding the Pfizer shot to pharmacies will require some additional planning surrounding

accordingly."

No word yet on who would be eligible for the shots.

Bates says the demand for the AstraZeneca shot continues to exceed the supply since age limits were lowered last week. He anticipates the province's current stock will run out sometime this week with a potential supply interruption on the horizon.

"We're getting inundated by calls and emails from people about the AstraZeneca shot ever since it went down to 40 plus," says Bates.

"With approximately 337,000 doses remaining and future

shipments not expected until May, we will continue to administer AstraZeneca to the U.S. for some of its pharmacies and primary care settings until we receive additional supply," says President Joe Biden suggested it.

Bates said the initial rollout would just be at locations in Toronto and Peel hospitals and says he is hopeful it will be implemented this week.

"It would be a very limited rollout for the first few weeks," says Bates. "We would roll out from there into other hotspots and then more broadly across the province."

Bates says the initial rollout would just be at locations in

Toronto and Peel hospitals and says he is hopeful it will be implemented this week.

Ontario Health Minister Christine Elliott says Peel Region currently has 25 COVID-19 hotspots and will be receiving additional vaccines in early next week once the province secures additional supply.

Elliott says the government is considering giving hospitals, such as Toronto and Peel, 50 percent of vaccines as recommended last week by Ontario's Science Table with a decision expected soon.

Adding the Pfizer shot to pharmacies will require some additional planning surrounding cold storage, but Bates says pharmacies will have the capabilities to manage the vaccine. Unlike AstraZeneca, the Pfizer vaccine needs to be kept frozen.

Select Ontario Pharmacies Offering 24/7 COVID-19 Vaccinations

Province Increasing Access to COVID-19 Vaccines to Support At-Risk Communities

TORONTO - The Ontario government, in collaboration with Shoppers Drug Mart, will offer 24/7 COVID-19 vaccinations for individuals aged 40 and over at 20 pharmacy locations, with the majority located in hot-spot communities.

As early as tomorrow, April 21, 2021, 20 Shoppers Drug Mart locations, including 16 in the hot-spot communities of Toronto, Peel and York Region, will begin offering the AstraZeneca/COVISHIELD vaccine 24/7 to individuals aged 40 and over. When the province begins to receive more vaccine supply from the federal government, it will expand 24/7 COVID-19 vaccinations to additional hot-spots.

Additionally, the province is now

enabling pharmacies to offer walk-in services. Ontarians should contact participating pharmacies to inquire as to whether they are offering vaccines by appointment, on a walk-in basis or both.

The province is continually expanding the pharmacy locations available to administer COVID-19 vaccines. Last week more than 700 pharmacies came on board across the province, bringing the total to over 1,400 locations. All eligible individuals can find a local pharmacy location offering vaccines through Ontario.ca/pharmacy/vaccine. In addition, many primary care providers are directly contacting eligible patients to book an appointment.

"Working with our pharmacy partners, who are ensuring communities who are most at risk have access to COVID-19 vaccines conveniently, close to home and

to additional age groups and locations,

around the clock," said Christine Elliott, Deputy Premier and Minister of Health. "Vaccines remain the best way to protect your health and the health of those around you, and I encourage everyone to sign up when you're able."

To help increase access to vaccines for those most affected by the COVID-19 pandemic, pharmacies in hot spot communities will receive additional doses of the AstraZeneca/COVISHIELD vaccine.

This is part of the government's commitment to dedicate 25 per cent of future vaccine allocations to hot spot communities by the end of April. The Ontario government continues to explore all options to secure more vaccines and avoid a severe impact on the province's health.

Ontario continues to ramp up capacity and expand its rollout to additional age groups and locations,

More COVID-19 patients dying at home, Ontario coroner says

Some COVID-19 patients are now becoming so ill so quickly that they die before seeking medical attention, Ontario's chief coroner said.

At least 23 people have died in their homes rather than in hospital nursing homes since April 1, Dr. Dirk Huyer told CBC News on Friday. There could be more cases that his office is unaware of, he added.

The new reality is a deviation from earlier waves of the pandemic, when most COVID-19 deaths took place in nursing homes and hospitals. It indicates how dangerous the current caseload is in Ontario, Huyer said.

Huyer was particularly troubled that some of the people who have died at home were in their 30s, 40s and 50s.

"That is not what we saw in the earlier waves. It was not common for younger people to die. So absolutely, it's concerning."

Huyer first mentioned the "unfortunate and sad" phenomenon at a news conference at Ontario's legislature building on Thursday.

"It's not that people were ignoring symptoms.... These are people who did have a stable condition and then deteriorated very quickly to their unfortunate death," he told reporters.

It's too early to say whether this is happening because of new variants of the virus that are more transmissible and can cause more severe illness, Huyer told CBC's *Mornin' Greetings*.

He said he sees the influenza-like syndrome, "so that people understand the seriousness of what we're dealing with."

"The numbers of cases we have

right now is the highest we've ever had in Ontario.... The more people that are infected, the more people will suffer serious illness, the more people that will die."

Toronto Mayor John Tory said the situation illustrates how important it is to get tested and see a doctor, "as opposed to hoping that it's just the sniffles."

"Whether you die in the hospital or die at home, you're dying at a young age from an illness that takes people... very quickly," Tory told CBC's *Mornin' Greetings*.

Health Minister Perry Hajdu said the temporary ban will allow Canada's public health experts to collect more data about the epidemiology of the virus.

He also insisted that Canadians avoid "falling into the trap of blaming an identifiable group for causing COVID-19. We've seen this with Asian Canadians. We must reject scapegoating. This virus is not Chinese, nor is it Indian, it's ours to share."

Canada imposes ban on passenger flights from India, Pakistan for 30 days

OTTAWA -- The federal government is imposing a 30-day ban on all commercial and private flights from India and Pakistan effective Thursday at 11:59 p.m. EST, as COVID-19 infections continue to rise in those countries.

Ministers of health, immigration, transport, public safety, and intergovernmental affairs delivered the update in a joint press conference Thursday evening, as the government faces pressure to curb variant spread domestically.

Transport Minister Omar Alghabra said they are imposing the temporary ban as more passengers arrive in Canada with positive test results from those two countries.

"Given the higher number of cases of COVID-19 detected in air passengers arriving in Canada from India and Pakistan, Transport Canada is issuing a notice to airmen, or NOTAM, to help direct passenger air traffic from those countries," said Alghabra.

Additionally, if travellers departing from those two countries take an indirect route home, they'll be required to show a negative PCR test at their last point of departure. Once they arrive in Canada, they'll follow the standard protocol, unless exempt, including taking another test and staying at a designated government hotel while they await their results.

Alghabra said the government won't hesitate to ban flights from other countries as the situation evolves.

He also insisted that Canadians avoid "falling into the trap of blaming an identifiable group for causing COVID-19. We've seen this with Asian Canadians. We must reject scapegoating. This virus is not Chinese, nor is it Indian, it's ours to share."

Health Minister Perry Hajdu said the temporary ban will allow Canada's public health experts to collect more data about the epidemiology of the virus.

He also insisted that Canadians avoid "falling into the trap of blaming an identifiable group for causing COVID-19. We've seen this with Asian Canadians. We must reject scapegoating. This virus is not Chinese, nor is it Indian, it's ours to share."

He also insisted that Canadians avoid "falling into the trap of blaming an identifiable group for causing COVID-19. We've seen this with Asian Canadians. We must reject scapegoating. This virus is not Chinese, nor is it Indian, it's ours to share."

country, which is the second-most populous in the world, also reported 2,104 new deaths related to the virus, which is its highest in a 24-hour period. In total, India has had more than 15.9 million COVID-19 cases and 187,000 deaths.

Both India and Pakistan have imposed country-specific travel bans or restrictions shouldn't be the only mechanisms being considered to mitigate variant spread.

"Everyone is panicking over India and saying 'oh, we got to stop the flights from India,' and a month ago it was Brazil, and before that in Canada we closed Mexico and a few Caribbean countries. And there's a pattern of it," O'Toole said.
